Java 12 Weeks Boot Camp

Week 5 – JDBC

Summary

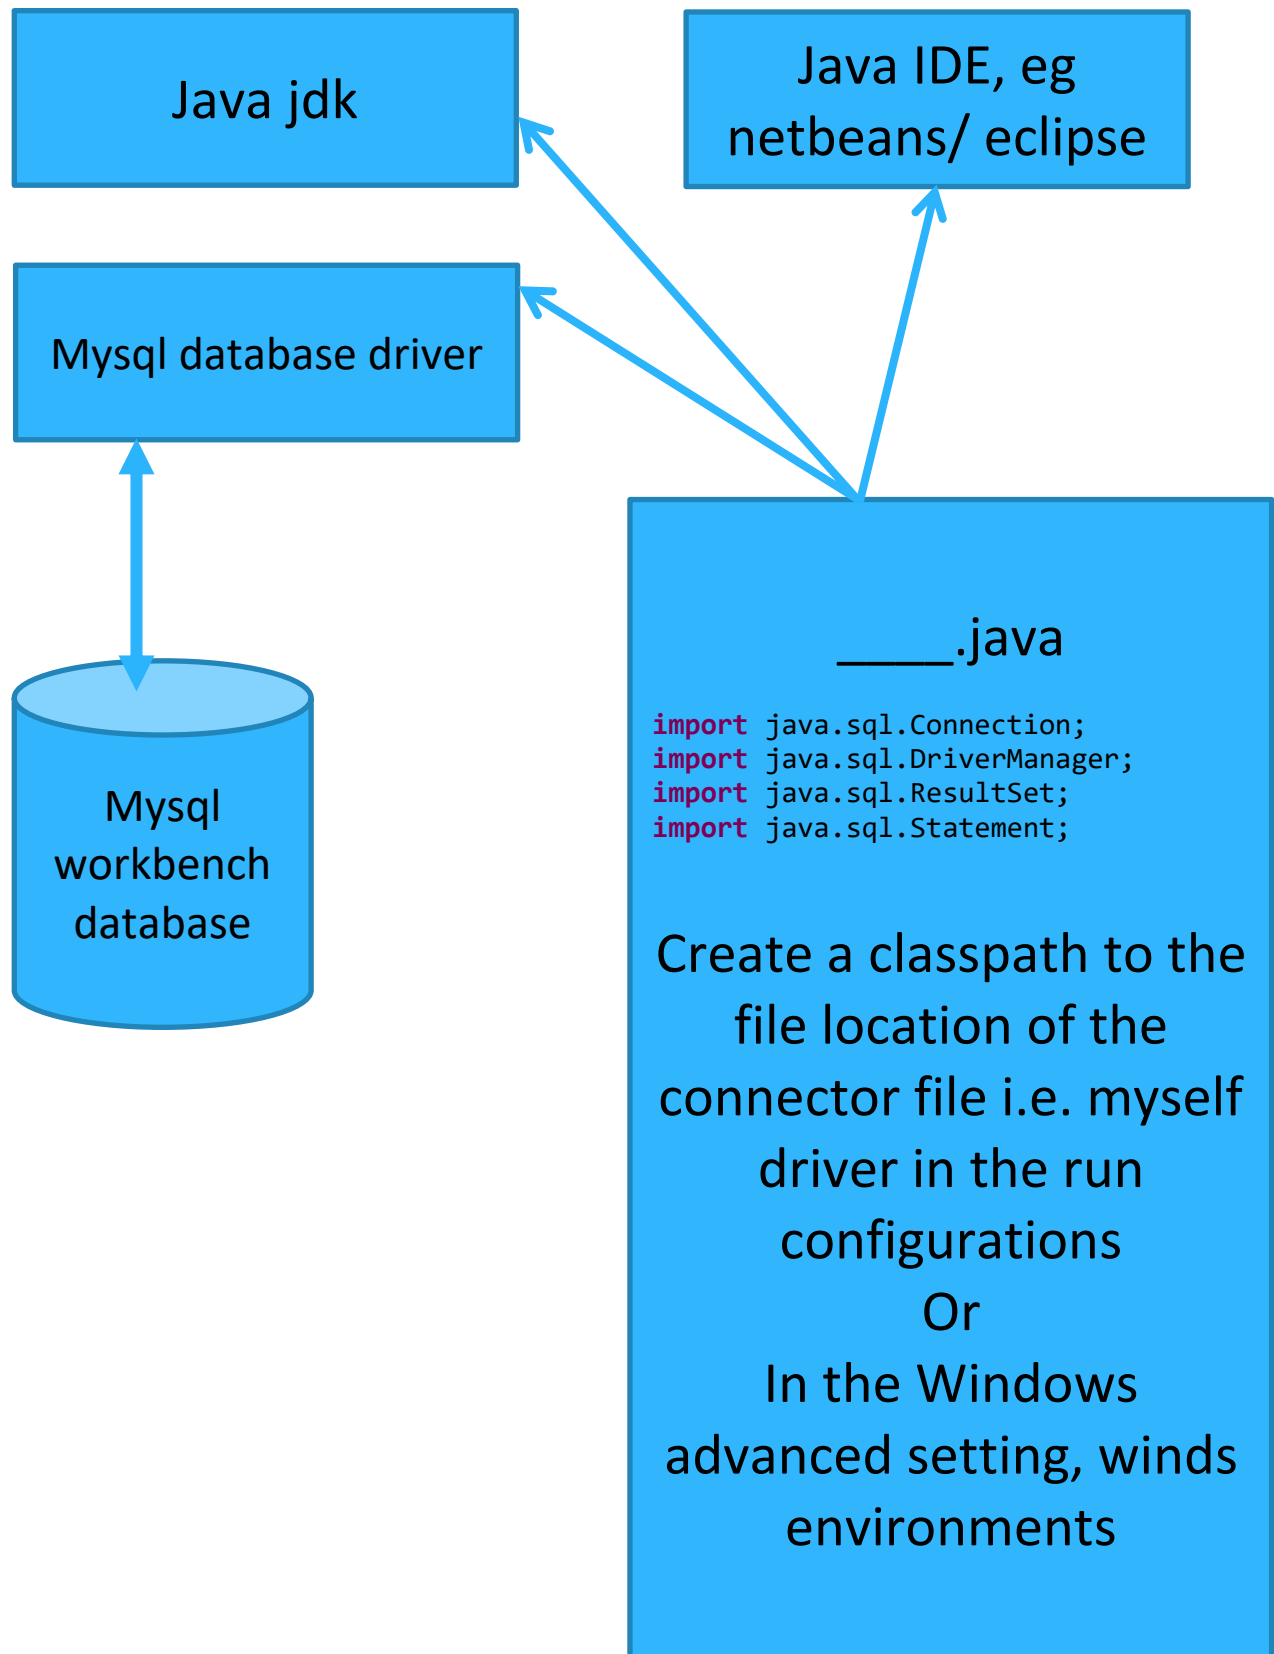

JDBC

JDBC Architecture

JDBC Driver Download:

Database	JDBC Driver Provider	JAR file name	Download
MySQL	Oracle Corporation	mysql-connector-java-VERSION.jar	Download JDBC Driver for MySQL
SQL Server	Microsoft Corporation	sqljdbc41.jar, sqljdbc42.jar	Download JDBC Driver for SQL Server
Oracle	Oracle Corporation	ojdbc6.jar, ojdbc7.jar, ojdbc8.jar	Download JDBC Driver for Oracle (login required)
PostgreSQL	The PostgreSQL Global Development Group	postgresql-VERSION.jar	Download JDBC Driver for PostgreSQL
Apache Derby	Apache Software Foundation	derby.jar, derbyclient.jar	Download JDBC Driver for Apache Derby
SQLite	Xerial.org	sqlite-jdbc-VERSION.jar	Download JDBC Driver for SQLite
Microsoft Access	UCanAccess.com	ucanaccess-VERSION.jar	Download JDBC Driver for Microsoft Access

Java file template

```
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.Statement;

public class exDBInsert {
    static final String JDBC_DRIVER = "com.mysql.jdbc.Driver"; // connection id
    // mysql database name: javabootcamp, find pw and username
    // in the mysql database workbench interface
    static final String DB_URL = "jdbc:mysql://localhost/javabootcamp";
    static final String USER = "pwd";
    static final String PASS = "";

    public static void main(String[] args) {
        Connection conn = null;
        Statement stmt = null;

        try{
            // connect
            Class.forName("com.mysql.jdbc.Driver");
            conn = DriverManager.getConnection(DB_URL,USER,PASS);
            stmt = conn.createStatement(); //can be in it's own try/catch

            // what to do
            // valid sql statement
            // ddl and dml sql commands
            String sql
= "insert into movieProgram (moviename, price ) values ('rocky', 15)" ;
            stmt.executeUpdate(sql);
            sql="update movieProgram set price=2 where moviename='rocky', ";
            stmt.executeUpdate(sql);
            sql = "delete from movieProgram where moviename = 'rocky' " ;
            stmt.executeUpdate(sql);

            // select sql commands
            sql = "SELECT moviename, price FROM movieProgram";
            ResultSet rs = stmt.executeQuery(sql);
            while(rs.next()) {
                String mName = rs.getString("moviename");
                // field names in the brackets
                double price = rs.getDouble("price");
                System.out.println("MovieName: " + mName + " " + price) ;
            }

            // close
            stmt.close();
            conn.close();
        }catch(Exception e){
            System.out.println("Error found"); //user friendly message
            // e.printStackTrace(); // will print error msg for debugging
        }

    }
}
```
